PDF995 PDF file printer driver

Pdf995: the Solution for your Document Publishing Needs
Download: →

If you just want something converted to a PDF, so you can give it to someone, or post it on your web site, then consider **PDF995**, a free tool available for download at www.pdf995.com/.

It is part of a suite of three utilities from Software995. Pdf995 is basically a printer driver, it installs as a psuedo printer. When you want to create a PDF from your application you just select **Print** from its file menu and then select the Pdf995 printer for the output. Pdf995 will accept the print stream from the application and write a PDF file for you. This software is **so** simple to use, and it does exactly what it says on the tin (ack. Ronseal). See [this page](#) as printed by Pdf995.

The other two utilities can be found at the same site, one is a PDF editor and the other a signature facility. These utilities may be used for free if you accept the sponsor page when you use them. You can eliminate the advert by buying a license for a modest fee.
